# MIND MATRIX

**NAME: MOHAMMED SAHIL R**

**EMAIL ID: mohammedsahilr39@gmail.com**

**SESSION: 04**

**REPORT ON: TASK REPORT**

**TASK: 02**

**TITLE:**

**DESIGN & DOCUMENT A BUSINESS CARD**

## 1. Introduction

In this task, I designed a business card layout using Jetpack Compose principles before writing any actual code. The objective was to plan composable structure, layout hierarchy, spacing, styling, and responsiveness for different screen sizes. Planning before coding improves clarity, reduces implementation errors, and ensures better UI consistency.

This document outlines my concept, layout structure, composable planning, resource usage, styling decisions, and accessibility considerations.

## 2. Business Card Concept

**Concept Name: Developer Portfolio Card**

**Target Audience:**

Recruiters, internship coordinators, and professional contacts.

**Purpose:**

To showcase my name, role, short professional description, and contact details in a clean and modern layout.

## 3. Content Planning

**Title:** Mohammed Sahil R.

**Subtitle:** Android & Kotlin Developer

**Short Bio:**

Passionate about building scalable Android applications using Kotlin and Jetpack Compose. Focused on clean architecture and modern UI design.

## 4. Layout Structure (Composable Planning)

### Portrait Layout Plan (Phone)

```
Column(
  Modifier
     .fillMaxSize()
     .padding(16.dp),
  horizontalAlignment = Alignment.CenterHorizontally
) {
   Image()
   Spacer(16.dp)
   Text(Title)
   Text(Subtitle)
   Spacer(12.dp)
   Row { Icon + Text (Email) }
   Row { Icon + Text (LinkedIn) }
}
```

**Layout Explanation:**

- **Column** used as main container.
- **Image** placed at top center.
- **Spacer** used to maintain consistent spacing.
- **Row** used for contact details (icon + text alignment).
- Proper padding applied to avoid edge crowding.

### 5. Tablet / Landscape Adaptation

For larger screens:

```
Row(
  Modifier.fillMaxSize().padding(24.dp)
) {
   Image()
   Spacer(24.dp)
   Column {
      Text(Title)
      Text(Subtitle)
      Contact Section
   }
}
```

**Adaptation Strategy:**

- Switch from Column to Row layout.
- Image aligned left.
- Text content on right.
- Increased spacing (24dp instead of 16dp).

This improves use of horizontal space and avoids excessive vertical scrolling.

### 6. Resource & Style Plan

**Image Resource:**

- profile.png
- Stored in drawable-nodpi folder.

**Text Styles:**

| Element | Font Size | Weight |
|---|---|---|
| Title | 28sp | Bold |
| Subtitle | 18sp | Medium |
| Contact Text | 14sp | Normal |

**Spacing:**

- Outer padding: 16dp (phone), 24dp (tablet)
- Icon-text spacing: 8dp
- Section spacing: 12–16dp

**Color Palette:**

- Background: Light Gray (#F5F5F5)
- Primary Text: Black (#000000)
- Subtitle: Dark Gray (#555555)
- Accent Color: Blue (#2962FF)

## 7. Accessibility Plan

- Added contentDescription to profile image.
- Icons labeled with descriptive text.
- Minimum touch target: 48dp.
- Good contrast ratio between background and text.
- Avoided very small font sizes.

## 8. Reflection

Designing the layout before coding helped me understand composable hierarchy clearly. I realized that layout planning reduces confusion during implementation. Thinking about responsiveness and accessibility early ensures professional UI standards. This structured planning approach will improve my efficiency in future Compose projects.
