SESSION: 04

REPORT ON: TASK REPORT

TASK: 03

TITLE:

LAYOUT REVIEW & IMPROVEMENT PLAN

1. Introduction

After designing and previewing the business card layout, I evaluated it using structured UI review criteria. The objective was to analyze visual alignment, readability, responsiveness, resource usage, and accessibility, then propose improvements.

UI review is an important professional skill because good developers not only build UIs — they refine and optimize them.

2. Review Criteria Analysis

>> Visual Alignment & Spacing

Observations:

- Content centered properly.
- Padding consistent (16dp).
- Contact rows aligned correctly.
- However, subtitle appeared slightly close to title.

Improvement:
Increase spacing between title and subtitle from 4dp to 8dp.

>> **Readability**

Observations:

- Title clearly visible.
- Subtitle readable but slightly small on smaller devices.
- Contact text readable but could benefit from slightly higher contrast.

Improvement:

- Increase subtitle from 18sp to 20sp.
- Slightly darken subtitle color.

>> **Resource Usage**

Observations:

- Image resolution optimized.
- File placed correctly in drawable folder.
- No unnecessary large images used.

Improvement:
Compress image further to reduce app size.

>> Responsiveness

Phone:

- Layout works well in portrait.
- Slight crowding in landscape mode.

Tablet:

- Row layout works effectively.
- More professional appearance.

Improvement:

- Use different composable arrangement for landscape.
- Adjust font scaling for large screens.

>> Accessibility & Usability

Observations:

- Icons labeled correctly.
- Touch targets nearly 48dp.
- Good padding.

Improvement:

- Ensure icons strictly follow 48dp guideline.
- Test using accessibility scanner.

3. Improvement Plan Table

Issue	Proposed Fix	Priority
Subtitle spacing small	Increase vertical spacing	Medium
Subtitle font small	Increase to 20sp	High
Landscape crowding	Switch to Row layout	High
Icon touch size	Ensure 48dp minimum	High
Image optimization	Compress file	Low

4. Lessons Learned

This review process taught me that small UI adjustments significantly improve professional quality. Evaluating layout from multiple perspectives (visual, responsive, accessibility) ensures a polished final product.

Before this task, I focused mainly on functionality. Now I understand that refinement and evaluation are equally important in UI development.

5. Reflection

Layout evaluation helps detect subtle usability problems that are not obvious during coding. Applying structured review criteria improves UI quality and developer thinking. In future Compose projects, I will always perform a review step before finalizing the design.
